High Level of Offender Accountability
With random alcohol and drug testing it is often difficult to discover alcohol and other substance abuse episodes. SleepTime® monitors sleep patterns and activity levels along with body temperature and when disruptions/changes caused by abusing illegal drugs, abusing prescription drugs or alcohol is seen by SleepTime®, a urine sample collection is called for by the SleepTime® system.

Urine Confirmation
SleepTime® uses the most universally accepted confirmation by all criminal courts for alcohol and drug abuse — urinalysis: LC/MS/MS for EtG (alcohol) and GC/MS for other drugs. Standard panels include: EtG, Cocaine, Opiates, amphetamine/meth, THC, Benzodiazepine, Oxycodone, dilution/specific gravity.

Deterrence
With an offender wearing the SleepTime® unit about their wrist 24/7 they realize that if they abuse alcohol or drugs that they will be discovered. SleepTime® is a constant reminder to the offender and provides treatment information to agencies not available with any other technology on the market today.

Monitors for Both Alcohol and Drugs
Other systems commonly screen for alcohol only. SleepTime® is the only system that screens for both alcohol and drugs on a daily basis providing treatment information which would require daily collection of urine samples from offenders.

Low Cost
Compared to other technologies including urinalysis, SleepTime® is affordable for offenders. It is available for direct short term lease to government agencies and service providers without requiring the purchase of special equipment. SleepTime® is a low daily rate.

Reliable
SleepTime® is shock resistant and has a rechargeable battery. Fifteen minutes per day recharge by offender. The SleepTime unit is waterproof down to 2 meters. The band is tamper evident and if removed by anyone other than the administering agency the proprietary locking device is destroyed showing evidence of tampering. A urine sample is always collected when tampering occurs.

SleepTime® is a product developed by StreeTime Technologies LLC. For more information please contact Intervention, Inc. at 303.450.6000
